```
{
    "category": "autorun",
    "rule": "example_rule",
    "strings": "example_string"
}
```

2. Fetch YARA Rules

Endpoint:

GET https://bitts.fr/vwar_windows/license-fetch

API Key:

7A6D317B24AAE34DD74B9B8E35E5F

Sample JSON Request:

```
{
        "rulename": "example_rule",
        "categoryname": "autorun",
        "conditions": [
            {
                "id": "56",
                "string": "example_string"
            }
        ]
    }
```

✅ Usage Notes

- All endpoints require a valid **API Key**.
- Use `Content-Type: application/json` for POST requests.
- Ensure secure HTTPS connections when making API calls.
- API keys are **unique per endpoint** — do not reuse them across services.
